DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2642

4. Claims 1-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jefferson (US 5,241,589; cited by the applicants and applied for the first time) in view of Darden (US 5,204,894; cited and applied for the first time).

The entire patent to Jefferson discloses an auto dialer that plainly teaches the processing of a directory number according to translation attributes to determine a dialable number. The only difference between the claimed invention and Jefferson is that the auto dialer of Jefferson does not dial a directory number associated with a matched name. However, auto dialers and its implementation into many telephony systems are well known and ubiquitous in the telephony art. And, Darden plainly teaches utilizing an auto dialer to dial a directory number associated with a matched name. Therefore, it would have been obvious even to one of ordinary skill in the art at the time of the invention to substitute the auto dialer of Darden with the auto dialer of Jefferson in order to improve the call routing function as taught by Jefferson. Substituting any named device with the same named device, in this case an auto dialer, to improve performance in any system is a universal motivation.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sussman, Bingaman et al., and Davis et al. all teach aspects of directory assistance/service.
